

CA 3: Mood Board and Case Study

Mood Board Design

Create a mood board for your chosen government app or website in Figma using a frame size of 2380 × 3368 px (vertical). Include the app name/logo, color palette, typography, UI inspirations, buttons, icons, layouts, and overall visual style direction. Focus on creating a clean, accessible, trustworthy, and citizen-friendly design language. Maintain proper alignment, hierarchy, and high-quality visuals. Export the final work in PNG 4x format.

Case Study

This CA should visually represent your complete UI/UX journey from CA1 → CA2 → CA3 in one continuous design narrative.

The work must be created entirely in Figma and should follow the same visual language, design system, typography, spacing, and interaction style developed in earlier CAs.

Your presentation should function like a professional UX case study deck, not a theory PPT. Keep the content visual, structured, and concise.

Mandatory Structure (10–12 Slides)

Slide 1 — Cover Page

- Project name
- Your name, section, registration number
- Course code: IXD802
- Hero visual/mockup
- Design theme preview

Slide 2 — Executive Summary

Brief overview of:

- What problem do you solve?
- Target users
- What was designed
- Final outcome

Use:

- 3–4 short blocks
- Metrics/icons
- Minimal text

Slide 3 — Problem Statement

Clearly explain:

- Existing usability issue
- Why the current experience fails
- User pain points

Use:

- Screenshots from original app/site
- Highlighted problem areas
- Short UX observations

This should connect directly with your CA1 heuristic evaluation.

Slide 4 — Research & Background

Include:

- User understanding
- Competitor/comparative analysis
- Government service context
- UX insights

Recommended visual elements:

- Persona cards
- Affinity clusters
- User quotes
- Comparative UI snippets

Avoid lengthy explanations.

Slide 5 — UX Process Journey

Show your workflow visually:

Research → IA → Wireframes → Design System → Prototype

Use:

- Timeline
- Flow diagram
- Process cards

This should reflect the iterative user-centered design process from the syllabus.

Slide 6 — Information Architecture

Present:

- Navigation hierarchy
- Screen structure
- User flow

Use:

- Tree structure
- Connected flow diagrams
- Simple labeling

This directly continues your CA2 IA work.

Slide 7 — Design System

Include:

- Typography
- Color palette
- Components
- Buttons
- Cards
- Inputs
- Navigation

Show consistency and reusable components.

Slide 8 — Wireframes Evolution

Show:

- Mid-fidelity wireframes from CA2
- Transformation into refined UI

Use:

- Before vs. after comparison
- Annotation labels

- Progressive refinement

Important Submission Rules

Mandatory

- Figma only
- Use Auto Layout
- Use Components & Styles
- Maintain proper layer naming
- Consistent spacing/grid system
- Follow one visual theme throughout

Strictly Avoid

- Long paragraphs
- Bullet-heavy slides
- Random colors/fonts
- Decorative clutter
- Inconsistent alignment
- Copy-pasted theory

Recommended Visual Style

Preferred Layout

- 70% visuals
- 30% text
- Large whitespace
- Clean grids
- Card-based structure

Typography

- Maximum 2 font families
- Strong hierarchy:
 - Heading
 - Subheading
 - Body
